

ACAPULCO

ANTOINETTE

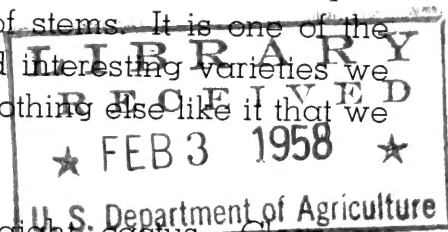

SAN SIMEON

1958

OUR NEW INTRODUCTIONS

ACAPULCO — Semi-cactus. Bright begonia rose with yellow at center. This is a large flower in a striking combination of color, not a blend, but two distinct tones in lively shades. Bloom is composed of many petals and is very close in formation to the true incurved cactus type. An early and a free producer on the best of stems. It is one of the most distinctive and interesting varieties we have introduced. Nothing else like it that we have seen.

ANTOINETTE — Straight cactus. Clear orchid pink with pure white center. Of unusual color and large for this type. It is easy to grow and supplies many fine blooms through a long period that are useful for all purposes. Acapulco and Antoinette are our first releases of a new strain begun a few years ago. We hope to have a couple more in other excellent colors ready to send out next year.

SAN SIMEON — Informal decorative. Creamy pink with reverse of petals a deeper pink which shows at the center of the giant bloom. You will note from the accompanying picture that it is a flower of ideal formation and real beauty. There are many fine pink dahlias and we believe this one will rank among the best. The color does not fade under adverse conditions. Habit of growth is very satisfactory. Our visitors score it high.

PRICE per strong division — \$15.00 each net. One each of all 3 — \$40.00 net.
